Tom,

Actually I had the same reaction, but after posting it, I decided to try it...trial and error, you know, and it does work. In fact, I may change my Favorite Links page and use it instead of the method I currently use. It is easier to use than you would think. I only played with the basic features offered with the script, but perhaps that is all you need.

Just create a new, blank webpage. Create a text box with several lines of sample text. Select a word on each line, and insert a hyperlink. Then copy the code and create a "insert HTML code fragment box", (you can put it anywhere on your page) and use Ctrl + V to paste the code into the fragment box. Then do a web preview and click your links, and voila...they open in a new window.

If you want to exclude a domain from opening in a new window, such as your navbar links? (I didn't test this, but anticipate it might be a problem), you will have to add them to the line:

```
var excludeddomains=["dynamicdrive.com", "javascriptkit.com"]
```

Try adding one of the domain names in your sample links.

I also noticed that if you want you can delete this much of the script from the bottom without affecting the way it works:

```
<p align="center"><font face="Arial" size="-2">Free DHTML scripts provided  
by<br>  
<a href="http://www.dynamicdrive.com>Dynamic Drive</a></font></p>
```

As you are giving credit to the author and dynamicdrive.com within the source code, I personally don't feel I need to give them visual credit on the page where I use the script, but you can decide that for yourself. If you want to give them credit, then I would post the script at the very bottom of your page. I may change my mind if I use the script, as I do believe in giving credit where credit is due.

Good luck.

DavidF

Thanks for the script David.
It's probably too far over my head, but I'll try it never the less.
I peruse the dynamicdrive website to see where to include and how to use.

Cheers,
tomZ

G'day to you tomZ,

Thanks for your comments...

I am not sure if the following works or not. I haven't tested it, but ran
across it sometime in the past and saved it in my "sample scripts"
folder. If it doesn't work, perhaps it will lead you to an answer. If you
do find a solution, let us know...

=====

Open offsite links in new window:

=====

<script language="JavaScript1.2">
<!—

//Open offsite links in new window option– By Jessica Hammer
//Heavily modified by Dynamic Drive
//Visit <http://www.dynamicdrive.com> for this script

//1)Enter domains to be EXCLUDED from opening in new window:
var excludeddomains=["dynamicdrive.com", "javascriptkit.com"]

//2)Automatically open offsite links in new window? (1=yes, 0 will render
a checkbox for manual selection)
var auto=1

var excludeddomains=excludeddomains.join("|")
rexcludeddomains=new RegExp(excludeddomains, "i")

if (!auto)
document.write('<form name="targetmain"><input type="checkbox"
name="targetnew" checked onClick="dynamiclink()">Open off-site links in
new window</form>')

Re: Opening hyperlinks in new or existing window

```
function dynamiclink(){  
  
if (auto||(!auto&&document.targetmain.targetnew.checked)){  
for (i=0; i<=(document.links.length-1); i++) {  
if  
(document.links[i].hostname.search(rexcludeddomains)==-1&&document.links[i].href.indexOf("http:"  
document.links[i].target=" blank"  
}  
}  
else  
for (i=0; i<=(document.links.length-1); i++) {  
if (document.links[i].hostname.indexOf(mydomain)==-1)  
document.links[i].target=""  
}  
}  
  
if (auto)  
window.onload=dynamiclink  
  
// -->  
</script>
```

<p align="center">Free DHTML scripts
provided by

Dynamic Drive</p>

G'day,
using Publisher 2000

I've read David Bartosik's "Hyperlinks that open a new
browser window"
http://msmvps.com/blogs/dbartosik/archive/2006/01/13/81266.aspx
and reviewed postings in the n/g. I understand how to force
links to
open in a new window.

However.....
I thought I saw/read ?somewhere? that there was a "global"
setting in MS
Publisher that would set all links to open in new windows
instead of the
default 'current window'. Naturally, I may have been
hallucinating (bad
ice in my drinks :), but if this sounds familiar to any one else.

Re: Opening hyperlinks in new or existing window

I'd
appreciate any response.

Thanks again to DavidB and DavidF for contributing so
much of your
knowledge. Your, and all contributors', answers to posts are
greatly
appreciated.

Cheers,
tomZ
