Ah yes, the ol' forms don't work problem ;-). From your other message it appears that you used FTP uploading, and you need to use HTTP uploading protocol. Clear as mud? Read this article and it will all be clear:

"Publisher web publication forms 101":

<http://msmvps.com/blogs/dbartosik/archive/2006/01/07/80564.aspx>

But then you ask, what is the difference between HTTP and FTP uploading protocols. Here is another link to help explain that:

The submit buttons on my webforms
(http://www.somoscapazes.org/index_files/formvoluntarios.html;
http://www.somoscapazes.org/index_files/formescuelas.html;
http://www.somoscapazes.org/index_files/donar.html) have worked in the
past,
but it seems every time I update my website (republish it with updated
info),
they stop working. I really have no idea what I did in the first place to
make them start working, so it's hard for me to figure out what to do to
make
them work again. Please help! Thank you, mle
