Publisher 2003 produces static, left justified pages by default, and there is no built-in support for centering. The only way to get the page to center is to manually add centering tags to the code, and to do that each time you make a change in the page. If you want to learn about centering tags, reference:

<http://www.htmlgoodies.com/>

For more information about your question, reference:

Understanding background padding in a Publisher web (aka white space):

Please help

I am trying to make my webpage float in the middle of the browser instead of the left hand side.

How can you do this in Publisher 2003
