Help! I am having problems publishing to the web. I set my FTP site, user name and password but it doesn't seem to connect except sporadically. Rarely....

Another problem...my hyperlinks to pdf documents do not follow through. They are not being added to the index\_files folder and do not work. What did I do wrong?

I am using Publisher 2003 and my site is on Aplus, 3amigosclinic.com.

Thank you so much for your help.
