The first time I went to the site, it crashed IE6 on me. The second time I did get it to load, so I am assuming that you did succeed in uploading after writing your message?? If you continue to have problems connecting, go to the tripod site and read the knowledge base about FTP uploading, and perhaps that will lead to a solution.

I did notice that you uploaded the "rich" version of the Publisher html, which is the heaviest. You should be doing a Publish to the Web to produce your html files, not Save As a web page. I would suggest deleting the old files on the server and uploading fresh.

Good luck.

Thanks David,  
this worked great for one of my websites, the other one still cannot upload.  
Filezilla shows a connection and then waiting for welcome message from the host but times out, any advice for this one? The host is a free host without  
www. in front,  
<http://uprisingguildsite.tripod.com>  
Is this causing my problem?  
Thanks again,  
Tronika

Since you are using IE7, I would suggest that you download, install and use  
<http://filezilla-project.org/> to upload your site. It is a free FTP client

Re: Publisher 2003 won't republish, says folder is missing or dele

that will make life easier. Download and read the documentation and instructions on how to set it up and use it.

Then open your Publisher file, go to Tools > Options > Web tab and uncheck

"Rely on VML..." and "Allow PNG...", and Compress your graphics:

<http://office.microsoft.com/en-us/publisher/HA011266301033.aspx>

Then when you Publish to the Web, direct your html files, the index.htm and

index\_files folder to your computer where you can find them. Then use filezilla to upload those to your site.

I am having several problems with Publisher 2003, I also use Window XP and IE7, I have created two websites in Publisher and saved them as as publisher files. Then, uploaded the htm folder, index\_files, to the ftp site, nothing worked even though they were htm files. I went ahead and uploaded the index.htm file by itself and only received the homepage without pictures and no links were working. I checked the web preview and everything works fine, I then tried the ftp client and the same thing happened. Finally I was able to load one website by publishing to web and typing in my domain. The webpages all worked and so did the links and pictures but it was on a two page wide webpage and I couldn't move the actual website below the ads posted by the host server. I upgraded the hosting services to eliminate the ads and was

Re: Publisher 2003 won't republish, says folder is missing or dele

told  
to cancel the other host account first before reloading to the  
new host  
(same  
domain) Now I have no web files at all other than my  
documents original  
file  
and everytime I try to republish to the new host (same  
domain) I get  
error  
messages stating that the documents in this folder are not  
available.  
The  
folder may have been moved or deleted, or network  
problems may be  
preventing  
a connection to the server. The error message box appears on  
top of the  
original web address folder, when I click the error message  
away, I  
type  
in  
the save name box index to see if it will still save in the  
correct  
original  
folder and recieve another error message with the same  
statement. I  
click  
ok.  
and the Microsoft Publisher box stating that Publisher has  
created a  
filtered  
html version appears. I click ok, another box pops up stating  
that it  
is  
publishing html files and then another pop up appears  
showing the save  
to  
the  
website and finally, I receive another error message stating  
that  
Publisher  
could not save the file to the web, check your URL or  
network  
connection  
and  
try again. I deleted the FTP file I originally used since it  
didn't  
work  
for  
me and left the http folder. Is there a way to republish my

Re: Publisher 2003 won't republish, says folder is missing or dele

site to the  
correct http address again. I am so frustrated with this. The  
other  
website  
won't let me load it in ftp or http. Please help. I am somewhat  
new to  
this  
and could really use some professional advice, I have read  
every  
support  
file  
I could find.

Thank you so much in advance.
