What is the "FrontPage Save Results Component" in the upper left corner? Did you insert some sort of code via the code fragment feature? I don't know that any Publisher built form needs anything like this to work, and it might be related to your problem.

Did you use HTTP uploading protocol, or FTP, or? Forms require HTTP. Perhaps reading the following references might help sort it out.

I am using Publisher to do my web site. I am using AT&T as my ISP. I made a quote page using a form from Publisher. I designed the page and added the

form. I updated my web site and tested the page when I click on the submit button I get the following message: Cannot run the FrontPage Server Extensions on this page:

"http://sportsworld-screenprinting.com/index_files/Page1874.html . I went into my control panel at AT&T and reset my Front Page Extensions, but the message still comes up. I have set the submit button to send information to my e-mail. I'm missing something. Please help me out. Thanks Gil
