Uh, actually, I did change it manually. I'll have to look next time I revise and save. I've printed your responses so I can recall the way back if I get lost again. I really do appreciate your help. It's been hell. I'm not cut out for this techy stuff, but am stubborn, determined and broke.

Bend is nice. Snow? We keep getting hammered over here. I have a niece in Sisters, sister in Eugene, sister in Portland and other assorted relatives in the area. I was born in Tacoma. Small world. Yeah, good times, kumbya :-)

Thanks a TON! I'll try the adobe or IE sites for help with flash. AGAIN. Sigh. Can't I just have what I want when I want it??? Is that too much to ask?

Cherrie,

Kewl! Glad it worked out for you.

If I read your reply correctly, you don't have to manually change .htm to .html. You can choose the .html extension when you Publish to the Web...but perhaps that is what you meant.

As per the Flash player, I can't help on that one. Post your question in the IE newsgroup, or perhaps the Adobe newsgroup. I am sure someone there will know the answer.

I live in Bend. Don, a frequent poster in this group lives in Tacoma Wa, so there are several of us in the Pacific NW.

Re: How do I Save from MHTML .mht to HTML format only

OH MY GOD!!!! IT WORKED, IT FREAKING WORKED!!!!

You are a compu-GOD!

The issue was the difference between html and htm on the index folder so I had to manually add the "L". It seems so weird to have had to go through all

this when it should have been so straight forward. the MHTML thing sent me

into a tail-spin that I've been working on for EVER!

THANK YOU THANK YOU THANK YOU!!! You can see the page...I think it is

actually posted now...(amateur that it is) at www.eoni.com/~wardc

And...I'm in La Grande, in Northeast Oregon...50 miles from Pendleton. Small, rural.

Now...if you can help me figure out (after a year of troubleshooting) why I

can't install Flash Player to internet explorer, I can die happy. I've uninstalled the old, reinstalled the new, checked the registry, stood on my

head, and whistled Dixie. I can install and use flash player on FireFox, but

not on IE in Vista. None of the "fixes" on the website, "fix" it.

And...why does Microsoft employ their tech support out of the country? Is it India? Kind people, knowledgeable people, they speak English, but not in a

way that I can understand it. So when you are already frustrated, and then

you hang out on hold, and then you speak with somebody you can't understand...razor blades begin to call your name.

THANKS AGAIN! Cherrie

Cherrie,

The fact that you are seeing the index.htm file suggests one of several

things. I see from the instructions at you webhost:

<http://home.eoni.com/supportFTP.cfm> that you need to upload your files to

the Public_html folder. As you have been successful in uploading Pub 2000

web pages before, I would hope that you would know that,

Re: How do I Save from MHTML .mht to HTML format only

but be sure to confirm that you uploaded your files to the correct folder on your host.

I also notice that your host says you have to use the .html extension for your index file. Generally index.htm and index.html are equivalent, and this should not matter. However, if you have been uploading Pub 2000 or even your newer files as "index.html", then when you uploaded "index.htm" the original index.html file would not be overwritten. If you have both an index.htm and an index.html file then a browser would not know which file is the default. Check to see if you have both. Check to see if you deleted your old Pub 2000 files. Remember that Pub 2000 did not use a subfolder to organize the supporting images or additional pages, so those loose files should be deleted from your site. Double check that you did indeed upload to the Public_html folder. And finally, if you must, when you Publish to the Web, choose index.html as your default instead of index.htm.

Once you figure out where to upload, and clean up your files on your host, don't forget that you have to also upload the "index_files" folder that Publisher generates when you Publish to the Web to the same Public_html folder...or at the same level as the index.html or index.htm file. It sounds like you forgot to do that, and that is where all your pictures and graphics are stored as well as your other pages. Upload the folder intact...don't upload the individual files.

Re: How do I Save from MHTML .mht to HTML format only

Third...given that you have limited space available, be sure to compress your images in your Pub file before you generate the html files/web pages. Publisher 2000 automatically resized and reduced the resolution of inserting images to the proper dimensions and 96 dpi when you "Saved as a Web Page". Pub 2007 doesn't. Select one of the images on your Pub page and the picture toolbar should appear. Mouseover the icons until you find the "Compress pictures" function. Click it and in the dialog be sure to set the Target Output to Web and apply the compression to all pictures.

You are almost there....

Off subject...Eastern Oregon? Which city if you don't mind me asking?

Hi David,
Thanks for your response. Your instructions were very clear and I really appreciate that. After following your instructions, I uploaded the index.htm file using FileZilla. Upload was successful. However, when I entered the URL to go to view it in real time, it showed a parent directory (the home page of the web hoster), and the Index.htm file as links rather than automatically opening to my web page as the other (2000) file did. If I

Re: How do I Save from MHTML .mht to HTML format only

double clicked the link, it opened into a partial web page, mostly black and white text, no graphics, and text was overlapping...formatting all messed up. So something is missing, and something about the way it is being read at the other end is not right.

My internet provider (local) www.eoni.com provides what they call free space of posting web pages or storing files. This free space will only accept html files. Something still isn't translating correctly. Yet the 2000 version (which of course is no longer installed) loaded and opened and was formatted fine.

When I opened the file to preview it before uploading, everything looked fine.

Any other ideas?

Thank you so much,
Cherrie

Folder Option >
View
tab and scroll down and
uncheck "Hide extensions
for known file
types".
Ok
out. This will allow you to
see the file extensions.

Re: How do I Save from MHTML .mht to HTML format only

When you generated your web pages with Pub 2000 you did a file save as.

In 2007, you can still do that, but perhaps try the more common method.

File

>

Publish to the Web. In the dialog make sure the file name is index.htm

and

direct your output to a folder on your hard drive where you can find

it.

You

can use index.html but it should be easier to use the default .htm

extension. In Publisher 2000

you automatically were

given a "Publish"

folder

when you did your File Save

as a Web page, but in 2007

you create your

own

folder. When you have

saved your files to that

folder, open it with

Windows

Explorer or My Computer. I

prefer WE and detail view

so I can easily

see

all

the files and file sizes. You

should see an index.htm file

and an

index_files folder that

contain your other pages

and all the

supporting

graphics and images.

Unless you specify a File >

Save as .mhtm. or .mht file,

you should

Re: How do I Save from MHTML .mht to HTML format only

not
be
seeing that extension. Nor
should you generally be
uploading a .mht
file
to
your host...save that option
for perhaps emailing a
single web page
containing the graphics to
someone.

You can now upload the
index.htm file and the
index_files folder to
your
webhost.

Hi,
I created my
first web
page in Pub
2000.
Uploaded it
to my web
host.

Later I
upgraded to
Pub 2007
and made
revisions.
When I
went to
upload
the
revision I
discovered
that my web
host will
ONLY
accept
HTML

Re: How do I Save from MHTML .mht to HTML format only

extensions
and I
am unable
to save my
page as
HTML
only. The
host will
not accept
MHTML
or
files with
.mht
extensions.

Someone
told me
"Look for
the Save as
type, "Web
Page,
Filtered
(* .htm;
* .html)" but
this saves as
MHTML as
does saving
as Single
File Web
Page.

I
was also
told "You
will only
see the
parenthetical
if Windows
is
configured
to show file
extensions.
But the
right thing
will happen
if you
choose
Web
Page,
Filtered.
The
extension

Re: How do I Save from MHTML .mht to HTML format only

will default
to one of
htm or html
if
you
don't
specify an
extension. If
you really
want one
specific
extension of
these
two,
then type
that in as
part of the
file name."

So, I am
running
Windows
Vista, MS
Publisher
2007 and
the
parenthetical
(* .htm;
* .html)
does not
appear with
saving as
filtered web
page,
and
it
saves it as
MHTML
with .mht
extension
that my host

I'm not

Can
somebody
who
KNOWS,
walk me

Re: How do I Save from MHTML .mht to HTML format only

through the
steps
on
how to
bypass this
and actually
save as
HTM or
HTML? MS
Pub 2000
had
this
option right
in the
pull-down
menu...2007
does not.
Thanks!
