You can create a link on your webpage to download the pdf file.

Create a folder on your ISP server where your website files reside; call it downloads or files or a name you prefer.

Next upload the pdf file into the download folder.

Next, open the pub file in Publisher and write

Get the filename here.

With the mouse highlight the word here and then select Insert, Hyperlink

Type /downloads/filename.pdf

I would like to add a Multi-page pdf to a MS Publisher website, have been trying to do it as a Insert Object but no luck. Help files gave nothing.

I

go to sites all the time that when you click on a link you go to the PDF and

can scroll down, how do I do that in Publisher or can't I?
