Look in the control panel, Accessibility Options folder, display tab, clear high contrast. If this isn't your solution look into updating your video/graphics driver.

I am in Microsoft Publisher 2003. I am no trying to delete the column. I am trying to adjust the size of the column. I hit shift and use the crosshairs to adjust the size of the column, but the initial outline of the column stays there even after I rsize the column. ..

I haven't a clue what you are trying to convey. Is this a table? Select the column, on the menu select table, delete column.

The initial column side stays when i try and resize columns,
how can I get
rid of it?
