Publishers 2003
www.tccu.com

The site was working just fine until I tried to change a hyperlink destination on the index.html folder. When I did this my it throw off my homepage and now it does not fully show everything that it needs to. Everything under this folder(http://www.tccu.net/index_text.html)will not show when I publish the site, but it will show up in the design view. Somehow I cant put the two together!!! PLEASE I have spent countless of hours trying to fix this problem...any help would trully be appreciated.
