All fine suggestions, thanx. Too bad none of them solve the problem. What I don't understand is the fact that I can print from all the other Office 2003 apps, Corel Draw, various Adobe programs, etc. without any problem, so the printer obviously works. Since I can print from MS Word, also part of Office 2003, but not Publisher, what about Publisher would make it "Unable to Load Printer Driver" while Word obviously can load it.

=====  
Sorry...that's all I have to offer. I can tell you that Publisher is very demanding on printer drivers and just because other apps will print does not mean Publisher is the cause of the issue. I suspect the problem lies somewhere between Vista, the printer driver and the fact that you have an all-in-one machine.
