Right, they show up as "Assigned" No.
AD Site shows as "Default-First-Site-Name".

Boundaries are defined as the AD site and four subnets (xxx.xxx.130.0, xxx.xxx.131.0, xxx.xxx.74.0 and xxx.xxx.76.0. Site server and SQL server are on .74.0).

Discovery is using Network, Active Directory System, Active Directory User, and Active System Group.

Still not clear if enabling push installation (which I want to do eventually) will automatically push out clients to everyone (which I definitely DON'T want to do now).

C.
