Q. Is SMS 2003 compatible with Microsoft Distributed File System (DFS)? If so, can DFS links be used as distribution points? (Updated February 27, 2004)

A. There is limited support for DFS in SMS 2003. Distribution points can be targets of a DFS root, but packages must be deployed to the shared folder on the distribution point, not to the DFS link name. Advanced Clients can use programs that point to <DFS root>\<DFS link>\<executable>. Legacy Clients can only use programs that point to shared folders on distribution points, not to DFS links.

HTH,
