Hi Jeff,

Thanks for the response. Well on the "Client Push Installation" properties ,accounts tab, i have added <Domainname/administrator>. This account definitely exists as a part of local accounts on the DC. Also 95% of my clients have the SMS advanced Client installed on them and they are working great! Its just these three machines that i am having problems with. I believe there is another person who has posted on this thread about having a simiar issue.It would great if you could let us know the solution to this.

Many Thanks!!
