Hi Rajan,

first let's concentrate on the MP issue: "Product: SMS Management Point --- Error 25051. Internet Information Services BITS support is not installed". Seems like your MP is not working correct (also have a look at mpsetup.log and mpmsi.log). You have to enable BITS for your IIS (Control Panel > Add/Remove Programs > Add/remove Windows Components > App Server > IIS > BITS extensions). Then remove the MP role, wait for the complete removal (watch logs mentioned earlier) and reinstall the MP again (watch logs for success/failure). I also suggest that you download the SMS 2003 Toolkit 2 and use the mptroubleshooter.exe to determine if the preinstallation requirements are met.

Regards,
Torsten
