Hi

Thank you for the update.

First, I would like to clarify that removing a DP in the system role will NOT remove the DP in the "distribution points" list of a package. The removed DP will still persist there, you will need to remove it manually or using script.

Also, I don't understand what you mean on DP on IIS. Could you capture a screen for that?

To capture a screen shot, please follow the steps below:

Step 1: Press the Pr Scrn key located at the top-right corner of the keyboard to capture a screen shot.

Step 2: Click Start, select Run, type MSPAINT in the Open box, and then click OK.

Step 3: Use Ctrl + V to paste the screen shot to the canvas. When we are prompted to enlarge the bitmap, press Y or Enter.

Step 4: Click the File (or press Alt+ F) menu and select Save.

Step 5: Select Desktop in the 'Save in' box and type 'screen' in the File name box.

Step 6: Select JPEG in the Save as type box and click OK.

The screen shot is located on the Desktop and named screen.jpg. Send it to jackwa@xxxxxxxxxxxxxxxxxxxxxx

In addition, you mentioned that "However nothing is happening??" . Could you let me know what you expect to see? I need to know your requirements in detail.

Re: Removing a DP

Hope this helps! If you have further concern, feel free to let me know.
Have a great day!

Sincerely,
Jack Wang, MCSE 2000/2003, MCSA 2000/2003, MCDBA, MCSDB
Microsoft Online Partner Support
