Single site SMS2003 SP1 w/advanced security on W2003 Server. Site server is also an MP and SLP. Approx. 3500 advanced clients. On our site server, we're getting large IIS log files on a daily basis. They average around 45MB per log file. We do have IIS logging enabled and it is scheduled to log daily. Default extended properties are selected in the Extended Logging Properties. There are no errors in the logs, just a huge number of the following entries which occur about every minute. The workstation IP address is different in each entry, of course.

```
2006-06-19 22:54:14 W3SVC1 {site server IP address} CCM_POST  
/ccm_system/request - 80 - {workstation IP address} ccmhttp 200 0 0
```

Has anyone experienced this, and would it be considered normal? Or is there something going on I need to remedy?
Thanks for all suggestions!

I've noticed this, and just manually cleaned up the older logs on an as needed basis...

Steve
