Try this..

```
SELECT DISTINCT
v_GS_COMPUTER_SYSTEM.Name0 AS 'PC Name',
v_GS_COMPUTER_SYSTEM.UserName0 AS 'User Name',
v_GS_NETWORK_ADAPTER_CONFIGUR.DefaultIPGateway0 as 'Gateway'
FROM
v_GS_COMPUTER_SYSTEM v_GS_COMPUTER_SYSTEM,
v_GS_NETWORK_ADAPTER_CONFIGUR v_GS_NETWORK_ADAPTER_CONFIGUR
WHERE
v_GS_NETWORK_ADAPTER_CONFIGUR.ResourceID = v_GS_COMPUTER_SYSTEM.ResourceID
AND ((v_GS_NETWORK_ADAPTER_CONFIGUR.DefaultIPGateway0 Is Not Null)
AND (v_GS_NETWORK_ADAPTER_CONFIGUR.DefaultIPGateway0 = '10.1.110.1'
OR v_GS_NETWORK_ADAPTER_CONFIGUR.DefaultIPGateway0 = '10.13.88.254')
```

Hello all –

SMS 2003 SP1, need to report on systems counts per subnet. Any help would
be appreciated.

Thank you

Jay
