The client will check the certs with the server so it should be ok.

"Seth" <seth@xxxxxxx> wrote in message <news:%23gZ6izAIIHA.1204@xxxxxxxxxxxxxxxxxxxxxxxxxxxx>

but they will need to access the Certificate Server.

I will publish a web enrollment site.. I dunno if it will be enough..

"Garth" <Spam@xxxxxxx> wrote in message <news:8A8497B0-57F1-49A3-B885-AB15EEB5174E@xxxxxxxxxxxxxxxxxxxx>

I don't think so, (I would have to RTFM to confirm that) but they will need to access the Certificate Server.

"Seth" <seth@xxxxxxx> wrote in message <news:eFYicj9kIHA.3888@xxxxxxxxxxxxxxxxxxxxxxxxxxxx>

Looks like solution is coming..
Also don't i need to import the SCCM Server's Web server certificate to clients?

"Garth" <Spam@xxxxxxx> wrote in message <news:E084B95A-B7AE-4CCB-853A-BFD697A602C2@xxxxxxxxxxxxxxxxxxxx>

Take a look at "How to Export the Site Server Signing Certificate for Configuration Manager Client Installation"
<http://technet.microsoft.com/en-ca/library/bb932126.aspx>

Re: SCCM Client Certificate question..

<http://technet.microsoft.com/en-us/library/bb632431.aspx>

Mixed Mode
Does not support
Internet-based client
management.

If you read my question and
business requirements you
will see that mixed mode is
not for me.
I hope someone who knows
the right solution answer my
question.

Because of
this:
"The
computers
that are all
over the
country are
not member
of any
domain.
They are
just
workgroup
computers"

You must
run the
server in
Mixed
mode.
Native
mode is
only for
computers
joined to a
domain.
