In the installation properties, go to the settings tab, you'll see where you can set the temp location.

I have an EXE built via SMS Installer, that I am able to run on XP. When I run the Executable, it creates 4 files in C:\WINDOWS\TEMP (1 exe and 3 TMP all with ~GL_***). While running on an XP box is OK, when I try to run it on a Terminal Server, this is not OK as the C:\Windows\Temp folder is locked down.
Is there anyway I can redirect these files to another folder
