Imran,

First thing to do is to check the BIOS of the systems as that may be an option which can be entered; if it is next thing to do is to check sms\inboxes\hin.v.box\sms\_def.mof to see if the mof file is collecting the relevant BIOS data, if it is fine, if not then you need to modify the file.

If the BIOS won't support this the easist way is to create a noidmif file for each syste.

Bernie

Hi,

here is my requirement. one of my customers want to add the serial no of the machine which SMS 2003 collects, the serial no is in a sticker at the back of the machine.

i want to know if its possible to add a field to the table that SMS uses to gather inventory data and put this data manually, or is there any other way of doing it?

regards  
Imran
