Machines won't appear in collection until the collection is updated and refreshed. The default update interval is 1 day, as you can see by looking in a collection's properties, Membership Rules tab. You can also manually update it by right clicking the collection (or the Collections node to do all collections at once) \ All Tasks \ Update Collection Membership. Then right click again and choose Refresh.

I'm sure you would find it helpful to spend time browsing the overview section of the docs which explain the basics of how to use sms and what to expect.
