Hi.

I have sms 2003 sp1, I've Windows xp sp1 and windows xp SP2 clients. I'm installing Advanced client in all computers (with client push installation method) and I haven't problems in computer with windows xp sp1. The problem is in the computers with windows xp sp2. In this machines the firewall is disabled. I've read the faq in

<http://www.microsoft.com/technet/prodtechnol/sms/sms2003/techfaq/tfaq03.msp#EABAA> where explain only for firewall enabled, although i've try enable print and file sharing in the firewall and not run (enabling firewall for test). I've verify the file ccm.log and i've looked for the machines with sp2 AND NOT APPEAR none of them in this log.

My sms configuration has a single site, my domain is windows 2003. I need install clients with firewall disabled.

Thank you in advance
