It could be many different things :

Since you are on Windows 2003, check if the ASP ISAPI extension is enabled

Check if Session state is enabled (see below)
Launch Internet Services Manager
go to your Reporting Point directory and
choose 'Properties'
Press 'Configuration' button which will bring up new
property pages
Choose the 'App Options' tab.
There should be a checkbox to enable Session state. Make
sure this is enabled

If the above don't help then try the following. Run notepad.exe and copy the
following text and save the file as test.asp in your reporting point folder

```
<HTML>  
<TITLE>Some test page</TITLE>  
<BODY>  
  
<% Response.Write "Hello Mum" %>  
</BODY>  
</HTML>
```

Does this simple asp page run ?

If not move the file to inetpub\wwwroot and try again. Does the simple asp
run ?
