I am trying to install SMS and SQL on seperate servers in seperate domains. I have gave sa and local admin rights to the computer account and to the account that is installing SMS. During the install wizard, I have chosen Adv security and selected SQL security. The account I use for SQL security has full access to the SQL server. In the SMS log file, it states that user does not have access to the database. Can someone please assist me and clarify this situation. Cheers.

.
