Dear All,

I was having one SMS server install with single server in my network . It was working fine . My SMS 2003 Server crashed and I installed new server with the same site name . I tried to populate SMS in active directory but I could not . I have discovered my all machines through Active directory in SMS console.

Now I want to install clients and configure the site setting on all machines

..

I am getting automatic site code discovery was un successfull.

Thaks & Regards
Gurbatullah Khan

.
