The synchost machine should have an internet connection to download the catalog. Since in your case you don;t have the connection hence its failing to download.

The workaround would be to do the task done by synctool manually and that means -

- 1> Download the catalog(mssecure.cab) from the link provided in the download.ini file (<http://go.microsoft.com/fwlink/?LinkId=23190>) using a machine that has internet connection.
- 2> Copying this file to the corresponding folder in the packagesource(for ENU catalog it will be ..\PackageSrc\1033)
- 3> From the admin console, do an update DP

Once these steps have been performed, either wait for the next scan ad run or schedule them again. You need to do the above mentioned steps everytime a new catalog is released.

FYI.. Following the above steps you won't get the newly added feature in SMS 2003 SP1 of pre-populating the database prior to the inventory, but it doesn't matter for your test run.
