This message ("Software Distribution Site Settings for the client are missing from WMI") means that client thinks that Software Distribution agent is disabled.

Make sure you have Advertisement Program Agent enabled and clients are talking to MP. If there are any issues in MP and client communication, then they will be logged in CCMEExec.log on the client. You can run PolicySpy.exe tool from SMSToolKit to make sure client is talking to a MP you are expecting.

Hope this helps.
