Can you explain what do you mean by doesn't work at all? It fails to find the files? It runs but fails with a failure exit code? Or client doesn't get the program at all?

Also, in your command line, what is S:\ drive? Is it a physical drive? Or a mapped drive? What it is mapped to? Under which context this drive mapping was done? And who mapped this drive in the first place?

Also, you might wanna see this KB article if you are running a batch file and your reg file in also on the DP
