This should do it:

```
IE6.0sp1-KB896727-SMS-Deploy-KB903741-x86-ENU.exe /q: a /r:n
```

Notice the icon s different looking than the other hotfixes that use /quiet /norestart? In my experience, whenever the icon looks like it does for the IE patch you mention, and it offers /q as a command line switch, use /q:a /r:n

This is an "iexpress software update package:
<http://support.microsoft.com/kb/197147/>

"all" command-line switches:
<http://support.microsoft.com/default.aspx?scid=kb:en-us:810232>
