Hi,

I have an evaluation setup of SMS2k3/Svr2k3/sqlsvr2005. So far I haven't even been able to patch the server! I use the DSUW, download the patches and create the program and adverts, all of which seem to run ok except that when I check the status messages it tells me that the update failed to install – message 11302. The logs don't offer much help as they report a success.

I've obviously got something wrong somewhere – can anybody suggest a solution please?

Many thanks

.
