So even if I'm not setting up Merge Replication but only want to use RDA, I need to install SQL Server Replication Components – is that a correct statement?

Harry

Thanks Ginny,

I was so familiar with CE 2 and using RDA that I figured 3 would be a breeze but really didn't find the step by step install instructs.....for instance I didn't know what I was suppose to see when I tried to hit sqlcesa30.dll in the browser then yesterday found the text:

'If the SQL Server Mobile Server Agent is configured correctly, Internet Explorer displays the string: "SQL Server Mobile Server Agent 3.0"'

I'll go back and uninstall everything and follow the Books Online deal to a t.

Thanks for responding.
Harry

Harry,

We're not really ignoring you – we just don't know why your configuration isn't working. Most people find setting up Merge Replication is actually easier with SQL Mobile. Maybe you already did this, but could you recheck to make sure you followed all the steps in the SQL Mobile Books Online, How To, Installation Tasks and Replication and RDA Tasks. I hope this will get you going again.

Is anyone using this successfully? I thought this was the
place to ask
questions regarding this technology but this newsgroup
appears to be
pretty dead. Any MVPs out there that could lend a hand –
please.....

TIA

Harry
