Hi!

I have a bunch of xsd files I _have_ imported into a dataset. I want to create a sql ce (3.0) database with the same schema.

What are my options?

- Should I use DataAdapters and Update() the schema to the database? Is this even possible?
- Is it better to load the schema into the database directly from the xsd-files?
- Should I create each table using a SqlCeCommand with commandtext taken from the dataset structure?
- BulkCopy?

Well, I'm lost :-)

Thanks in advance!

/ Peter
