By all errors using Connection object or Recordset object.

example:

```
conn.Open( connStr, userId, pwd, Integer( adOptionUnspecified ) );
```

Miro,

On what code do you get this error message?
I get this error only when i try to do something unsupported, like
Connection.OpenSchema()

Hi all,

I have problem with trapping errors.

All errors reports only this constant message box:

"Errors occurred.[,,,,]"

I use SSCE with Delphi and ADO (Connection, recordset and other objects).
Connection.Provider = 'Microsoft.SQLSERVER.MOBILE.OLEDB.3.0'.

Is there a chance to find error reason ?
ADO is no more good for SSCE ?

(SSCEngine and errors – this works fine)

Re: OLE DB (ADO) error messages

Thanks in advance,
Miro
