How are you printing directly from the SQL CE database?

Hi,

Please note that my MS SQL database contains arabic data, I can transfer it easily to my pocket pc and browse it on my SQL CE database.

But when I'm printing this data it is appearing "?????" question marks. As if it doesn't understand these words.

Is there any specific function or way of saving transfered data into SQL CE so that i won't face this problem.

N.B. please note that if I type arabic in a Text box on my (POCKET PC) for example and print it, it will print correctly.

Whereas, if I print directly from SQL CE database it would give the "???????" Question marks.

Please advise
and Thanks in advance
Regards
Tarek Ayoubi
