

# Received assert dialog from what I thought was a runtime SQL Server Client library

While using the SQL Server Client libraries for accessing a SQL Server 2000 database, I received the following two assertions:

-----  
Program:<MyApplication>  
File: q:\SPHINX\NETLIBS\nt\sock\src\ntsockc.c  
Line: 1471

Expression 1 == pConnectionObject->fCallCheck

AND

-----  
Program:<MyApplication>  
File: q:\SPHINX\NETLIBS\nt\sock\src\ntsockc.c  
Line: 957

Expression 0 == pConnectionObject->fCallCheck

I don't know why I am receiving assertion dialogs from what I believe is a SQL Server Client runtime library.

The operating system is Windows 2000 Server, Service Pack 2.

The version of the DB-Library and all network libraries is 8.0.194 (date 8/6/2000).

Has anybody seen this problem before?

Does anybody have an explanation for the assertion dialog?

Is there any way to ensure that I do not get assertion dialogs from an OS level?

Thanks,  
mmarch
