After install sql 2000 server – client tools on Win XP workstation, it won't allow to install sql 2000 server Service Pack 4 (it will quit to desktop immediately without any error or warning) But we can install it on win2000 workstation.

- Is it normal that can't apply or not need to apply service pack on winXP clients?
- How can I check which sql 2000 server service pack applied on clients?
