Hello Scott!

Report Server fails if Report Server service attempts to connect to the database that is not yet online. To fix it, you can try set a dependency to Report Service.

Go to Regedit

[HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\ReportServer]

Modify or create the DependOnService multi-word value to include MSSQLSERVER.

I re-installed .Net 2.0 and it still fails. Then I uninstalled ALL of the .Net versions (1.1, 2.0 & 3.0) then re-installed .Net versions 1.1 and 2.0. The install of SQL Server Developer Edition still fails. I am now getting the following message from the System Configuration Check:

EDITION CHANGE CHECK
– Edition Change Check (Warning)
Messages
Edition Change Check

To change an existing instance of Microsoft SQL Server 2005 to a different edition of SQL Server 2005, you must run SQL Server 2005 Setup from the command prompt and include the SKUUPGRADE=1 parameter.

The install still fails with the same error message. But checking the Application Event Log the large number of error messages that I listed below are gone. The only error message that I got is:

Re: Setup of 2005 Dev edition Client Components fails

Event ID: 107

Report Server Windows Service (MSSQLSERVER) cannot connect to the report server database.

I am going to try and install once again.

Scott

I can suggest you to download .Net 2.0 and install it seperately (just give it a try and see if it installs it correctly.)

You can download it from the following address:

<http://www.microsoft.com/downloads/details.aspx?FamilyID=0856EACB-4362-4B0D-8EDD-AAB>

Also, please be sure your Windows is up to date. And try SQL Server setup again.
