SQL 2000 Ent. on 2003 sp1 Cluster.

- Installation & Service accounts are both domain admins
- NetBIOS disabled on NICs
- Cluster service & failover running properly
- Cluster resource names contain no spaces
- User PATH for TEMP and TMP set to c:\temp
- AVScanner Services stopped
- Licensing Mode = Per Processor (4)

Cluster Machines reside in own OU

SQLstp.log files on Node1 and on Node2 both indicate "Installation Successful"

End abruptly end with

"Setup Failed to Perform Required Operations on the Cluster Nodes"

2 Nodes.

Have tried installing only to the local node -- Same Result

No indication of "Installation Failed" or "exit code was (2)" as in MSKB
321063

After above error popup, cannot re-run cd:\ENGLISH\ENT\AUTORUN.EXE until
server is restarted, and will only do so from "shutdown /i"

Please Advise.
