Hi

You need a separate resource group. i.e. IP Address, Name and disks.

Regards

Could someone please point me in the right direction ?
Thanks,

Karthik

Hi,
I have setup a 2 node clustering (Active/Active) of SQL Server 2005 (IA64) on windows server 2003 (IA64) ..Now i am planning to add Analysis Services on this cluster.
My question is if i have to add the analysis services as a cluster aware application, do i need to have another IP address and instance name which is different from SQL Server 2005 ipaddress and instance name or could it be added as a resource that has just the dependency on the drive.

Thanks,

Karthik
