When you rebuilt the cluster, did you add disk resources as dependencies for SQL Server? If not, then SQL Server cannot see the disks.

Geoff,  
On a different note, we rebuilt the SQL cluster network today. However when I run the MSI, I am seeing the below given error this time:

Event Type: Error  
Event Source: MsiInstaller  
Event Category: None  
Event ID: 10005  
Date: 10/16/2006  
Time: 4:06:34 PM  
User: myDomain\SQLServerAccount  
Computer: SQLServer  
Description:  
Product: Database --- Error 26201. Error -2147217900: failed to create SQL database: ApplicationDb, error detail: CREATE DATABASE failed. Some file names listed could not be created. Check previous errors..

For more information, see Help and Support Center at  
<http://go.microsoft.com/fwlink/events.asp>.

Any thoughts on what this error is, and what could be causing this?
