I have opened a case with Microsoft Support. Hopefully we can clear this out.  
I'll let you know how it goes.

Hi!

I have a problem with Full Text Search in a clustered environment.  
The Resource Fullt Text Search will not come online, it fails and giving

Re: Full Text Search fails in a 2 node cluster

me

a error in the log that says

"An Error occurred during the online operation for instance <SQL Server Fulltext (UTB2)>: 80070002 – the system cannot find the file specified."

I've tried to reinstall Full Text by reading the KB 827449, but when i get to the part where i should use the command "ftsetup.exe" i get a error in the application log saying:

"Faulting application ftsetup.exe, version 2000.80.2039.0 faulting module msvcr71.dll, version 7.10.3052.4, fault adress 0x00014d5c."

I also get a similar error concerning msvcrt.dll version 7.0.3790.1830.

We are using Windows 2003 SP1 and SQL 2000 Enterprise edition SP4

The strange about this is that right now there are 4 instances on the same node where 2 of them has full text online and working but the 2 others has the error mentioned above, so as i can understand there are no problem with

the nodes but instead i believe that the instances is not aware of Microsoft

Search. therefore as the KB article says i need to run the command FTSETUP.EXE to configure the instances with Microsoft Search.

Right now i have no other ideas, fearing that the only thing to solve this is to reinstall the whole SQL instance :o( wich is nothing i'm looking forward to.

So please if you have any ideas, fill me in...
