Hi,

How do I find I am in admin group or not? How do I find what rights I am given?

That depends up on the type of authentication you are using to access SQL server. If you are normal user and you are using SQL Authentication, then you can run sp\_helplogins to get all the informations;

How to check:

Login to query analyzer and go to the database you have prev and execute

```
sp_helpuser <user_name>
```

If you have admin rights then execute the below command from Master database.

```
sp_helplogins <login_name>
```

Can I make changes on package without admin rights ?

You can create packages, but you can modify the pckage with out knowwing the package admin password.

Is there any limitation in enterprise manager as client tools and enterprise manager on server where sql 2000 server is installed?

No, there is no limitations.

Thanks

Hari
