Hi,

>From the server execute the below command from command prompt

```
osql /U sa /P passwd /S servname
```

If the execution give the same error then we can conclude that the Authentication is not changed to SQL Server and Windows mode.

Open the enterprise manager, navigate to your server, right click on the left pane, choose properties, select the security tab and change the "Windows only" to "SQL Server and Windows".

STOP and START MSSQL Server service

Note:

By default the 'sa' password is blank. Change it quickly. Go to the security folder (Enterprise manager) of your server and change the sa password. Include this password in your connection string.

Thanks
Hari
