Hi.

With Microsoft-IIS/6.0 + CGI/1.1, I want to connect with my 'MS SQL Server'.

My connection data are:

- user: john
- DSN: domain.com.john
- pass: xxxx
- server: db.domain.com

I'm trying with:

```
-----  
use DBI;  
print "Content-type: text/html\n\n";  
$dbusername = 'john';  
$dbpassword = 'xxxx';  
$server = 'db.domain.com';  
$database = 'domain.com.john';  
$dbh = DBI->connect("DBI:ODBC:driver={SQL  
Server};Server=$server;Database=$database;UID=$dbusername;PWD=$dbpassword")  
|| die "$Error_Message $DBI::errstr";  
print "OK\n";  
-----
```

But it doesn't work. I've got DBI installed cause this piece of code does work:

```
-----  
use DBI;  
print "Content-type: text/html\n\n";  
print "Hello world!\n";  
-----
```

Any suggestion? Thank you very much.

.
