Hi Maggie,

Thank you for the update.

From the symptom you meet, I suggest you to make sure the account you use

to connect to the sql server have proper permission to access all the databases. Please try to login the computer which host SQL Server as the local administrator and try to connect to the SQL Server to see does all the database is there. Also, you could use the SA account to connect to the SQL Server.

If so, please goto the Security section to add the SQL account to the sysadmin server role to check does this issue appeared or not.

Please let me know the result so that I can provide further assistance.

Sincerely,

Wei Lu
