Hi Ivan,

I searched through Google Forum and found your article.

I have the same problem now. Do you solve the problem now?

And what's the reason?

Thanks for any help.

Derek

We are now testing out program using Vista.

When we directconnectSQL2000 using ADO, andSQLauthentication, the login fail.

When we use XP or Windows 2000, using ADO as connection, the program run fine.

Is there anything we need to set?

Ivan
