-

I setup a mirroring database, have principal (host A), mirroring (host B), witness (host C)

i create a user account and login account "usera" can login can retrieve data in principal server (host A)

when occur failover to host B, host B become principal, but i can connect host B using "usera", i saw host B have a user account "usera" in host B, but haven't the login account, then i create login account "usera", but the "usera" login account only can login only, can't access database, anyone can help,

Many many thanks.

.
