After moving the Master, Model, MSDB and Tempdb databases I still found that a new DB created through DTS was still placed in the old location.

I found that the Master database location within the (Master) Sysdatabases table was for the old path. Correcting the location resolved my problem.

(Direct modification to system tables isn't allowed unless you start SQL using the -m option. BOL Search: Allow Updates Option / Administering SQL Server)

Hope this helps!!
