Hi Sue,

You were right when I execute `xp_cmdshell 'dir \\server\data\*.*'` from sqlagent I got a denied access message.

This is the first time than I'm using a folder out the sqlserver for schedule job.

My servers are in just workgroup, not domain, not active directory.

How can I setup permission for sa account under `\\server\data` folder?

Tks in advance.

JFB
